

PNT 220 NLX

ON CHASSIS

Working height

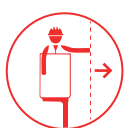

The PNT 220 NLX is an articulated aerial work platform designed to facilitate access to difficult areas thanks to its high-performance articulating jib. With a working height of 22 metres and an outreach of 11.20 metres, this elevation solution meets the needs of professionals on various worksites. Its hydraulic stabilisers ensure optimal stability even on irregular terrain or in the presence of obstacles, guaranteeing safe working conditions. The 360° rotating basket supports up to 250 kg, allowing operators to bring their necessary equipment and materials for effective interventions.

Suitable for public lighting maintenance, festive illumination installation or pruning work, the PNT 220 NLX combines reliability and versatility in a robust structure. This platform mounted on a chassis offers a balance between technical performance and practicality for all your height work requiring precision and accessibility.

FOUR STABILISATION MODES

VEHICLE DRAWING

STANDARD SPECIFICATIONS

- New simplified control station
- Engine start/stop from the basket
- 4 stabilisation modes
- Assisted turret and basket centering
- Emergency circuit on manual pump
- Proportional controls on all movements
- Secure access to the work platform
- Hose conveyor chain inside the mast for optimum protection
- Rigid PVC protection of the upper control station

OPTIONS

- Signalling (tri-flash, 2 flashing lights, stripes)
- Insulated low voltage or tubular aluminium basket
- 220 V circuit in the basket
- Storage compartments
- Aluminium side panel
- Tool holder in the basket
- Extended warranty
- Maintenance package
